

Monitors Arabic and English news for a Saudi tourism communications team, drafts a cited daily briefing, and alerts on negative stories as they spread. **An analyst approves everything before it reaches the Director General.**

HOW IT FITS TOGETHER

COMPONENTS

COMPONENT	DOES	WHY
RSS feeds	9 publishers, 5 in Arabic	Publishers' own feeds, no scraping
n8n	Schedules, approval forms, email	Human sign-off built in
Python + FastAPI	Fetch, group, classify, draft	Plain code, no agent framework
Embeddings	Same event across outlets and languages → one story	Needed to count how far a story spreads
GPT-6 Luna	Labels every article	Cheap; caught 4 of 4 crises in the eval, no false alarms
GPT-6.1 Sol	Writes the daily briefing	Best quality where the DG reads
SQLite	Articles, labels, approvals	Zero setup; Postgres in production

MONTHLY RUNNING COST

ITEM	MEASURED PER UNIT	PER MONTH
Embeddings	142 tokens per article	\$0.83
Classification (Luna)	1,543 tokens in (99% cached), ~195 out, per article	\$5.10
Daily briefing (Sol)	~6,600 in, ~1,000 out, once a day	\$0.70
Alerts	no AI call	\$0
n8n	self-hosted, free	\$0
Total		≈ \$7

At ~1,500 articles a day. Runs on the client's own servers.
